

Organizations often turn to the BIG 5 consulting firms to provide services such as:

- Business and technology consulting,
- Systems integration,
- Procurement consulting,
- and "e"-initiatives.

TiBA offers these same services at a high-value proposition for our clients: the same services at attractive rates because of our success and high utilization in the regional market.

We provide technology consulting services and have a proven track record for delivering tangible, effective business and technology solutions and services to our clients.

TiBA has partnered with many companies in the manufacturing industry to solve a variety of business problems. Our customers received benefits that far outweighed the cost of the services provided - assisting the market leaders in this industry to achieve the desired results, in record time, on budget.

#### PROJECT

---

For a global industrial automation company we analyzed systems, resolved issues and refined operations of an interfacing sub-system between the warehouse management system and the order management system in disparate geographic locations.

#### PROJECT

---

For an automobile manufacturer we have completed a series of process analyses that resulted in reduced cost associated with the purchasing of certain commodities. This work has led to follow-on development of new applications and processes to support and improve procurement initiatives.

#### PROJECT

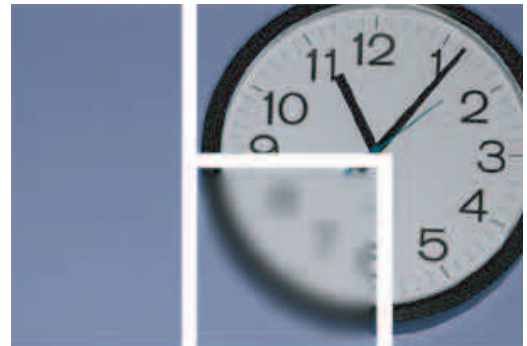

---

For a global manufacturer of precision-made, high-speed textile equipment we were engaged in a full life-cycle development process to build a customer service order system. The new system increased customer satisfaction through our reengineered order process, thus reducing the number of customer service centers from five to one and the time for order taking and confirmation by more than 50%. Additionally, this project resulted in many enhancements and additions to the existing mainframe Order Entry and Sales systems.

#### PROJECT

---

For a manufacturer/distributor of plastic film we performed full life-cycle system development for a B2B web application that supports registered customers with online order requisitions and reports. New orders can be filled out from scratch or filled in automatically by selecting the 'Re-Order' option.

## PROJECT

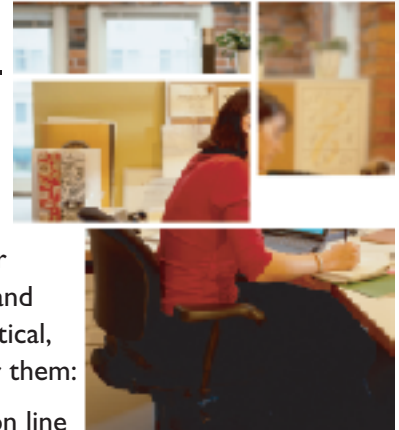

For a manufacturer of audio compact discs we provided full life-cycle system development services to design and build a 24/7/365 Manufacturing Execution System.

- Manages the manufacturing process for 750,000 CD's per day
- Performs business analysis and pattern detection for emerging problems
- Maintains one year genealogy for each CD for decision support

## PROJECT

For a leading provider of electronics manufacturing and supply-chain management services for the automotive industry, we assisted with numerous consulting and application development projects that support the manufacturing line both directly and indirectly. TiBA replaced a global services company in providing support on many mission-critical systems. Our relationship with this international manufacturing company continues today, and we expect to continue that partnership for many years. Examples of time-critical, failure-is-not-an-option, high-risk projects that we successfully undertook for them:

- Initial assessment on viability and resources required to move a production line across the country.
- Process consulting for analysis, requirements, development, implementation, and rollout for a software solution interface between test equipment and production-line SFDM (Shop Floor Data Management).
- Analysis, development, implementation and rollout of the airbag and ABS system line-side- stock component tracking interface solution to meet automotive industry requirements.
- Analysis for pack-and-ship requirements to meet automotive industry standards.
- Design, development and implementation services for integration between our client's multi-plants centralized, ERP, logistics and procurement system and their logistics suppliers' vendor stocking system.

We work with clients from the initial identification of the business problem, through identification and planning of the solution, and finally to the execution of that plan. TiBA's depth and experience enable our consultants to understand our clients business, analyze the situation and then assist in determining the best, most cost efficient solution for their needs.

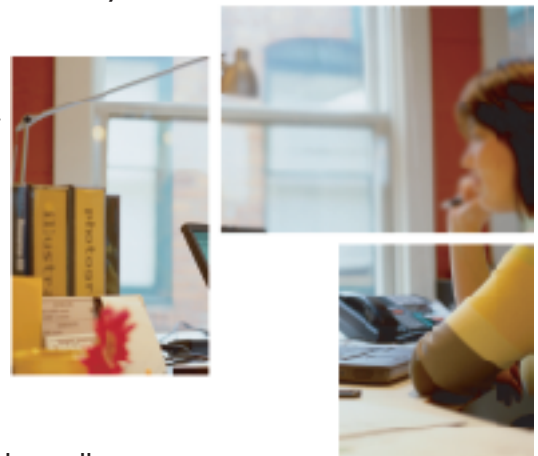

TiBA Solutions, headquartered in Greenville, SC, provides customized information technology solutions for mission critical business problems. We offer a robust line of services: business consulting, project management, and customized software application design and development. These flexible service offerings can be combined to provide a complete, customized solution with a single point of accountability.

The TiBA *i*Solution™ methodology is central to our delivery process. The effectiveness of our *i*Solution™ approach produces solid results: quality applications delivered on-time and within budget.

The REAL business benefits for our clients are substantial:

- Business priorities drive the plan
- Business requirements are central to the solution
- Business benefits are realized more rapidly

We don't take a cookie-cutter approach to delivering quality results; we do take a personal approach to identifying and solving your business problems.
