

TiBA Solutions develops and implements custom software solutions tailored for mission-critical business problems. We offer a robust line of services:

- Business consulting
- Project management
- Customized software application, design and development

TiBA Solutions consultants are seasoned professionals with business and real-world experience. Our talented team of software developers, business consultants, and project managers confront technology challenges head-on to help you achieve your goals. Their skills allow them to address your pressing technology needs and provide hands-on solutions. Our flexible service offerings can be combined to provide a complete, customized solution with a single point of accountability.

TiBA Solutions has a proven track record in multiple industries, including telecommunications, manufacturing, distribution, e-commerce, and finance. In addition, TiBA is experienced at working with government agencies.

TIBA SOLUTIONS PROVIDES

- A single point of accountability
- Sound methodology compliant with Project Management Institute practices
- Complete life cycle development and implementation
- A continuum of service from project outset to completion.

BUSINESS CONSULTING

Our custom software solutions address challenges unique to your business. We get to know your business, your industry, and your situation.

Experienced TiBA Solutions Business Consultants:

- Identify objectives
- Document challenges
- Define key business characteristics
- Perform a needs assessment
- Create a strategic framework for development

APPLICATION DEVELOPMENT

Today's technology environment reveals unique challenges. Disparate systems, outdated technologies, out-of-the-box solutions, and other factors can lead to an information technology patchwork. TiBA Solutions can help your company move to enterprise-wide technology solutions.

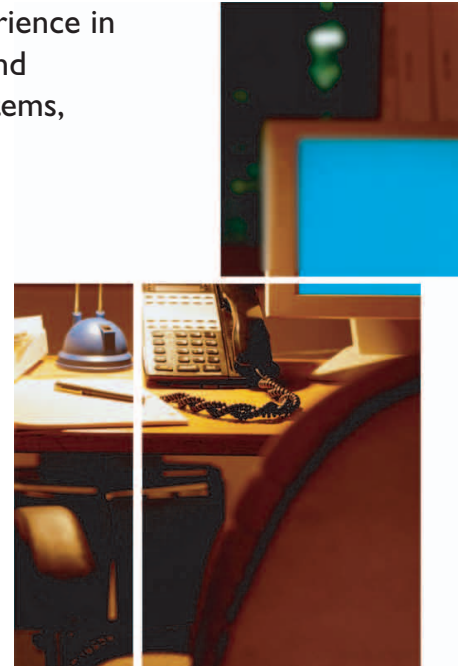

The TiBA Solutions methodology prescribes an orderly process that ensures a high-quality result. Our approach is to deliver incremental functional releases to allow the client user community and system support staff to review and provide feedback throughout the development cycle.

Our technical consultants have been selected for their depth of experience in database development, object-oriented programming, web-browser and communications environments, high-volume transaction-oriented systems, and real-time operations.

IMPLEMENTATION

Concepts without execution are worthless. There's no value to unvalidated vision. At TiBA, we work with our clients to implement each custom software solution. We complete the design and development sequence with implementation services. We take your custom software solution from concept to completion.

With a single point of accountability, you can easily manage the TiBA relationship and rest assured that the project will be completed on time, on budget and on target.

APPLICATION DESIGN

No journey can be made without a roadmap. TiBA Solutions generates a detailed roadmap for each custom software development project. Our experts work closely with your key stakeholders to generate the most powerful results in your custom software development product.

TiBA Solutions Application Design Phase defines and documents:

- Overall application architecture
- External functionality
- Database design
- Application process flow
- Acceptance tests

Through the application design phase, TiBA Solutions brings technology innovation to your organization, generating custom software solutions that have real-world impact.
